

Overwatch Patch

The Cornerstone of Great Cybersecurity

Overwatch ensures that your entire infrastructure is patched, has the right software, and is configured correctly regardless of OS, application software, or geographic location. Monitored and managed 24/7 by our security experts. Our platform monitors all endpoints for misconfiguration, applies the latest critical patches, and tracks compliance. Overwatch tracks patch vulnerability status in real-time across your entire infrastructure.

Benefits:

- All patches available are installed and working
- Know the compliance status of your endpoints
- Real-time updates avoid fast-moving threats
- Reduce cost with zero effort of your IT Staff
- Avoid non-compliance

Key Features:

- Works seamlessly across Windows, MacOS, and Linux operating systems
- Software titles (Adobe, Java, Google Chrome, & Firefox) patched and configured correctly
- Automatic real-time patch deployments or use client-controlled manual patch approvals
- Single Platform of Record eliminates point solutions and multiple reporting sources
